
Timeboxing (TMBX)

Course Overview

Timeboxing is a technique often used in agile project environments. This course describes timeboxing and how to apply it on projects which are time critical. The course blends the theoretical concepts of timeboxing with the harsh realities of applying the technique in the real world. This is achieved with the use of a case study.

Course Objectives

To give delegates an understanding of the detailed nature of loading and managing a timebox. To explain how to avoid common pitfalls of timeboxing such as extending the deadline and unrealistic estimation.

Who will the course benefit?

Project Managers and Team Leaders who are responsible for the loading and managing of a timebox. Also, team members who will be actively involved in creating the timebox deliverable.

Pre-requisites:

None

Course Content

- What is a timebox?
- Timebox types
- Why use timeboxing?
- Structuring a project using timeboxes
- How to build a timebox plan
- Advanced timeboxing:
 - The 'domino effect'
 - Prioritisation
 - Calibration
- Avoiding common pitfalls

A case study is used throughout the day to reinforce the theoretical content.

Duration: 1 day
